

In today's ever-changing and dynamic society, the push towards a global economy is easily noticed. Gone are the days of independence, countries now are more than ever, are looking to benefit from interactions between other countries. In doing this, the global economy is strengthened through trade. However, there are opponents and downsides derived from a global economy. Organizations such as the World Trade Organization (WTO) were assembled to control and maintain the global trading procedures to ensure that it is as fair as possible. Despite the WTO and other organization's attempts to provide a trouble-free trading system, issues continue to arise, such as government run trading, cheap labor, and other factors. Because of these issues, there is an ongoing debate regarding free trade and fair trade.
